ЭКОЛОГИЯ

Content

Virgin pulp, fibres, Chemicals

Material

Virgin fibres Virgin pulp fibres are produced out of softwood or hardwood by using a delignification process, meaning that e.g. lignin's and resins are separated from cellulose material – result are brown fibres.

Bleaching of fibres

Bleaching is a cleaning process step within pulp preparation to achieve out of the brown fibres a bright pulp, but also to get a certain purity of the fibres to fulfil demands - e.g. for hygiene products.

Today there are different methods in use for bleaching - the former used chlorine bleaching is more or less not used furtheron. For our products we use TCF (Totally Chlorine Free bleached fibres) where ozone, oxygen and hydrogen peroxide are used. Chemicals All chemicals used in the process as well as the functional chemicals are assessed from an environmental, occupational health and safety and product safety point of view and have to fulfil given legal demands.

Functional chemicals are e.g.: Dry strength agent Colourants Fixing agents Process chemicals (for performing papermaking process) are e.g.: Defoamer Yankee coating agents Dispersing agents Slimicides Retention aids

Product safety

Finished products are in compliance with legal requirements for food safety. They are tested at independent authorised institutes who confirm accordance to legal demands.
